

# **GEOPM: Open Source Development Process**

**Christopher Cantalupo**

**P3 and the GEOPM software team ( + Brandon Baker, Brad Geltz and Diana Guttman)**

**Intel Federal**

**April 16, 2019**

# GEOPM Introduction

GEOPM: a distributed runtime for HPC job level power management

Main web page:

<https://geopm.github.io>

Open source project developed under BSD three clause license

Plug-in architecture enables user extension

# Public Services for Development Process

## Github issues

- <https://github.com/geopm/geopm/issues>
- One number to track all communication
- Issue number can be used in all other tools
- **Anyone** can create an issue:
  - Managers, internal developers, external developer, users, researchers, github searchers

## Gerrithub code review

- <https://review.gerrithub.io/#/q/project:geopm/geopm>
- Checkpoint for all patches that are merged
- SW team vets patches and makes suggestions

## Travis-CI

- <https://travis-ci.org/cmccantalupo/geopm>
- Runs unit testing on all developers forks
- Every patch pushed by developer is tested
- Passing Travis-CI is required for +1 review

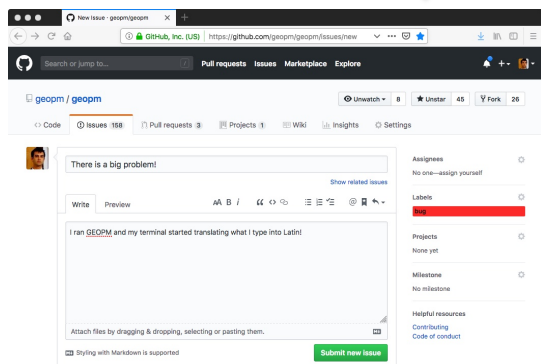

## Slack message board

- <https://geopm.slack.com>
- Announcements are made to the community
- Invited individuals and email domains
- Primary developer communication channel
- Users and researchers are enabled

User problem/request

User files an issue

Slack pings developers

Slack notifies community

Travis-CI is triggered

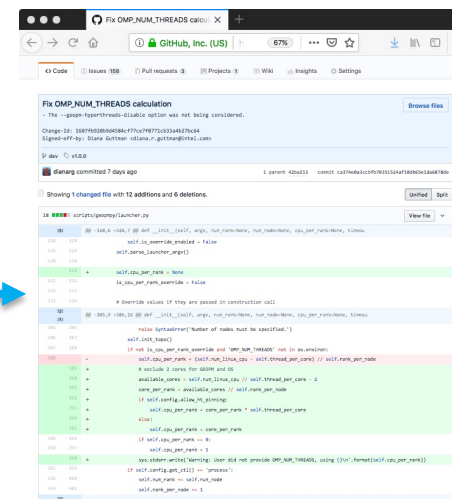

Submit patch with Gerrithub

Patch ready to merge

Patch needs more work

Patch pushed to Gerrithub

Team reviews the patch

Developer works on a solution

# Github Issues

## Bug tracking

- Mark an issue with the **bug** label
- Leave bug report
- Critical details and links in comments
- Refer to bug number elsewhere

## Feature planning

- Mark an issue with the **enhancement** label
- Milestones are planned every two weeks
- <https://github.com/geopm/geopm/milestones>

## Large projects and big ideas

- Mark an issue with the **break-down-please** label
- Link related issues back to big idea issue
- Choose to create label for project

## Releases

- Issues required for release labeled with version
- [Version 1.0 issues](#)

## Arbitrary labels

- <https://github.com/geopm/geopm/labels>
- Enabling agile development and quick lookup
- Labels for project deliverable requirements

# Sprint Review and Planning

## Sprint schedule

- Sprints are scheduled every two weeks
- New milestone created for each sprint
- <https://github.com/geopm/geopm/milestones>

## Sprint review

- Review last milestone closed issues
  - Discuss the done criterion for closed issues
- Review last milestone open issues
  - Determine progress on issue
  - Move open issues to backlog or next milestone

## Sprint planning

- Review new milestone open issues
- Determine developer load by assignee tag
  - Overloaded: remove from milestone or reassign
  - Underloaded: Pull items from all open issues list
- Close completed milestone

## Backlog

- Open issues updated continuously
- Prioritize by adding to future milestone

# Slack

## Provides open communication

- Direct access to external stakeholders
- Enabled through web/laptop/phone application
- Accessible anywhere on any network
- Common tool used in many business contexts

## Integrates Github, Travis-CI and Gerrithub

- Automatic messages to #development channel
- Subscribers notified of important events
  - Github Issue opened/closed
  - Patch merged from gerrithub
  - Results of Travis-CI pass/fail on dev branch
- Pings phones of maintainers

## Platform for collaboration

- High bandwidth chat sessions
- Historical record by topic (channel)
- Ability to “pin” important items
- Essential for internal development process
- Easy filtering by channel
- provides users with bandwidth limit

## A virtual space for sharing

- Enables remote work
- Great for distance collaborations
- Initiate an ad hoc phone/skype meeting

# Bug Tracking

## Commit message includes “Fixes #”

- Developer marks commit message with **bug**
- “Fixes #123” messages github: close issue 123
- Github closes when the change is submitted
- This links the patch to the issue number

## Gerrithub review process

- Patch to fix bug is created by developer
- Posted to Gerrithub for review
- Developer verifies bug is fixed and “+1 verifies”
- Developer signals ready by “+1 review”
- Reviewers marks “+1 review”
- Last reviewer marks “+2 review” and submits

## Updating github

- Submit button merges patch to dev branch
- Messages with “Fixes #” in them close issue
- Close by hand if developer forgot the “Fixes #”

## Travis CI

- Each developer maintains a fork of geopm
- This fork has an associated Travis-CI for testing
- When the main repo is updated Travis-CI runs

## Slack integration

- The #development channel is automated
- Closed bug updates the channel with message

# The Open Process

Follow best practices to produce a well engineered product

Engage the community by making the development process live, open and familiar

Open tools provide a great platform for development of open software

Github's flexible interface enables extensions like Gerrithub, Travis-CI and Slack

Future enhancements to enable public execution of private CI features

- Continuous code coverage
- Continuous static analysis
